MEMOLUB® PLCd/2 (PLC Powered & Programmed)

A full featured externally powered, self-contained automatic lubricator that is powered and programmed with your PLC

General Description

The MEMOLUB® PLCd/2 is a reusable, electro-mechanical lubricator that is externally powered and programmed using your PLC. It’s constant 350psi lubricant output pressure allows the unit to be direct mounted, remote mounted up to 40 feet* away from the lube point, or coupled with a progressive distribution block to lubricate from 2 to 12 lube points. It is available in three capacity sizes 120cc, 240cc and 480cc. This model is designed for PLC controlled machinery where a 24VDC power supply is available.

Programming the PLCd

The MEMOLUB® 24V-PLCd/2 lubricator has a unique design utilizing a Power-Through Memo which contains the electrical connections needed to power the unit. This gives the user the ability to quickly remove the lubricator for fast lubricant cartridge change-out while avoiding disconnecting the electrical connections. A 5-foot extension cable on the Power-Through Memo is connected to a PLC-controlled power supply.

The PLC program controls the frequency of lubrication output cycles. For a single lubrication stroke apply 24VDC power for 5 seconds then turn off the power. Repeat this process when the next lubrication cycle is required. If continuous power is applied the unit will cycle every 20 seconds for a total of 10 cycles and then go into sleep mode. To get the 24V-PLCd/2 lubricator out of sleep mode, remove the power and start the unit again.

Further control is provided by adjusting the volume of lubricant ejected on each cycle. A set of 8 special stroke-limiting washers are supplied with each lubricator. When the Power-Through Memo is used without washers (yielding full piston stroke), the output volume at each stroke is 0.63cc. For each washer (including the "C"-shaped lock washer) inserted into the brass adapter of the Power-Through Memo, the output volume is decreased by 0.04cc per stroke.

Operation

The MEMOLUB® PLCd/2 metered positive displacement pump has been primed before shipment and is ready for use. On first installation, all fittings, lube lines and bearings should be pre-charged with the same lubricant that was ordered with the lubricator. Next, install the Power-Through MEMO fitting to your lube point and connect the lead wire to your preprogrammed PLC. Screw the MEMOLUB® PLCd/2 on the Power-Through MEMO fitting. Once power is applied to the lubricator the unit will cycle once and proceed to follow the PLC program. Periodic visual inspection is recommended for all MEMOLUB® lubricators.

When the lubricant cartridge is empty, unscrew the MEMOLUB® PLCd/2 lubricator from the Power-Through MEMO fitting. Place the unit on a firm surface, outlet end down. Push down on the clear plastic housing while turning the black plastic locking ring counter-clockwise. The housing and spring assembly will separate from the pump base. Remove the empty cartridge and replace with a new one.

*Maximum lube line length is dependent on ambient temperature, grease type and application back pressure.

**Electrical Specifications**

- PLC-controlled lubrication cycles
- 2-wire, 5ft extension cable, Brown(+), Blue(-)
- Input voltage: 24VDC
- Max Amps: 0.5A
- Maximum wire length 30 ft.
- Minimum time between output cycles: 10 minutes
- Polarity Protection
MEMOLUB® PLCd Installation Instructions

Replacing the lubricant cartridge

5. To open, place the lubricator upright on flat surface. Press firmly and turn locking ring counterclockwise while holding the ribbed surface.

6. Remove the paper, disk-shaped card from the replacement cartridge and fill in the "Start Date" and "Change date".

7a. Carefully squeeze air out of the cartridge until grease begins to emerge from the outlet.

7b. Place the cartridge on the inlet of the pump housing.

8a. Hold the cartridge with the outlet facing up. Carefully remove the cartridge plug. Turn the red housing over and gently place it on the outlet of the cartridge.

8b. While holding the cartridge and pump housing together, flip the assembly over and hold the cartridge in place.

9. Place the clear housing assembly over the lubricant cartridge and pump housing.

10. Holding the locking ring by its ribbed surface, turn it clockwise until it clicks into the locked position.
